Stop condensation

Top five solutions to stop condensation

1. Keep kitchen and bathroom doors closed when in use. If possible open a window.

2. Adequately heating your home can reduce condensation levels as warmer air holds more water vapour. If you have any concerns with the efficiency of your heating system report it.

3. Dry clothes using an airer and not on a radiator. Outside if possible.

4. Use saucepan lids when cooking.

5. Spray or wash down areas affected by mould with bleach or anti-mould cleaner (follow manufacturers instructions).

For further information contact the condensation team, CityWest Homes, on 0207 245 2590 or cwhplannedmaintenance@cwh.org.uk.
